

VFFS Packaging System

The V45 model combines the durability of our V32 bag machine with the sleek design and versatility of our V60 bag machine. The result is an intermittent motion vertical bagging solution that is designed to withstand harsh environments where high pressure wash down is required.

Designed with purpose, the V45 features all stainless steel design allowing machine hose down without covering any components. From easy change features to user friendly controls and a highly efficient operating system, this rugged solution will maximize your uptime and increase packaging efficiencies.
